

Edit Fonts

NOTE: If you do not see the "DESIGN", "PAGES", or "SETTINGS" tabs at the top of your editor and you need to make a change, please send a request to support@addisonmultimedia.com to add access to those tabs. Each theme has default fonts for the Site Title, Paragraph Titles, Paragraph Text and Links. You can change these fonts using the Change Fonts area found under the Design tab.

Each section (Site Title, Paragraph Title, Paragraph Text and Links) has its own font options. Let's take a look at each.

Site & Paragraph Titles

The Site Title is the Title that appears (or may not appear if you delete it) at the top of every page of your site. The Paragraph Titles can be added to a page via the Title element.

1. Select a new Font Face from the drop-down menu.
2. Select a new Font Size.
3. Change the weight of the font to make it heavier / thicker or lighter / skinnier.
4. Change the Font Color by clicking the color box. You can select another color here or even enter a specific HTML color code.

Paragraph Text

The image shows a dark-themed editor interface for paragraph text. On the left, a sidebar contains settings: 'Quicksand' font face, 'Size' set to 16, 'Weight' set to Regular, 'Color' set to a dark grey, and 'Line Height' set to 21. A 'Reset' button is at the bottom of the sidebar. On the right, a preview of a person's face with a camera lens is visible above a paragraph of text.

Hey there! My name's Tom and I'm travelling the world with little more than my camera, Macbook, a bicycle, a few changes of clothes and a trusty towel in case I find myself in trouble (a Hitchhiker's Guide to the Galaxy reference there, for anyone who hasn't had the joy of reading it). I've lusted to wander since I was a little boy in Pennsylvania and now I'll be documenting my journeys to and through every country in the world.

The paragraph text is all the regular text on your site.

1. Select a different Font Face from the drop-down menu.
2. Select a new Font Size.
3. Change the weight of the font to make it heavier / thicker or lighter / skinnier.
4. Change the Font Color by clicking the color box. You can select another color or even enter a specific HTML color code.
5. Select a different Line Height. This adjusts the amount of white space between each sentence in a paragraph.

Links

The image shows a dark-themed editor interface for links. At the top, there is a 'CHANGE FONT' button with a left arrow. Below it, the 'LINKS' section is visible. It includes 'Link Color' (set to blue), 'Visited Color', and 'Hover Color'. A color palette is open, showing a grid of various colors. A blue square is selected in the palette, and a right arrow is visible at the bottom right of the palette.

Links connect people to other pages on your site, pages on other sites, email addresses and files that they may want to download.

1. Change the color of an unclicked Link.
2. Change the Visited color (this color indicates to the site visitor that they've already looked at that link).
3. Change the Hover color. This is the color given to the link when you hover the mouse over it.

If you ever want to switch back to the default fonts for a section, just use the Reset link found within each section.
